

AUTHOR FORM

Individuals in the author list of a manuscript should meet the authorship criteria specified in the sources of International Committee of Medical Journal Editors (ICMJE), Council of Science Editors (CSE), Committee on Publication Ethics (COPE) and adopted by Bagcilar Medical Bulletin. Accordingly, individuals named as authors should;

- 1) Contribute substantially to the development of study idea and/or hypothesis; acquisition of data; analysis and/or interpretation of the data,
- 2) Participate in writing and/or reviewing of the manuscript,
- 3) Approve the final version of the manuscript.

All of the three criteria above should be met by the individual to be considered as author. Individuals who do not meet all the three criteria above or who make contributions in some other aspects, should be listed in the **“Acknowledgement”** section. No one, other than the ones listed as authors, should have contributed to manuscript writing or reviewing; ghost writing is not acceptable. Allowing the ones who do not contribute substantially or the ones who do not approve the final version take place in the author list is considered as a breach of authorship and scientific responsibility.

Authors should have contributed in at least three of the categories listed in below. The ones who has lesser contribution are listed in Acknowledgement section. Please type the name of the contributor author next to each category.
