ABOUT US

The Turkish Journal of Ophthalmology (TJO) is the only scientific periodical publication of the Turkish Ophthalmological Association and has been published since January 1929. In its early years, the journal was published in Turkish and French. Although there were temporary interruptions in the publication of the journal due to various challenges, the Turkish Journal of Ophthalmology has been published continually from 1971 to the present.

The Turkish Journal of Ophthalmology is currently published in Turkish and English languages. TJO is an independent international periodical journal based on single-blind peer-review principle. TJO is regularly published six times a year and special issues are occasionally released. The aim of TJO is to publish original research papers of the highest scientific and clinical value at an international level. Furthermore, review articles, case reports, editorial comments, letters to the editor, educational contributions and congress/meeting announcements are released.

The target audience includes specialists and physicians in training in ophthalmology in all relevant disciplines.

The Turkish Journal of Ophthalmology is indexed in the PubMed Central (PMC), Web of Science-Emerging Sources Citation Index (ESCI), Directory of Open Access Journals (DOAJ), Gale/Cengage Learning, Index Copernicus, EBSCO Database, Scopus, Turkish Medline-National Citation Index, Turk Medline, CINahl, Proquest, TUBITAK/ULAKBIM and Turkish Citation Index databases.

Open Access Policy

This journal provides immediate open access to its content on the principle that making research freely available to the public supports a greater global exchange of knowledge.

Open Access Policy is based on the rules of the Budapest Open Access Initiative (BOAI) http://www.budapestopenaccessinitiative.org/. By “open access” to peer-reviewed research literature, we mean its free availability on the public internet, permitting any users to read, download, copy, distribute, print, search, or link to the full texts of these articles, crawl them for indexing, pass them as data to software, or use them for any other lawful purpose, without financial, legal, or technical barriers other than those inseparable from gaining access to the internet itself. The only constraint on reproduction and distribution, and the only role for copyright in this domain, should be to give authors control over the integrity of their work and the right to be properly acknowledged and cited.

Subscription Information

TJO is sent free of charge to subscribers. Address changes should be immediately reported to the affiliates and to the managing editor. Subscribers who do not receive the journal in the relevant time period should contact the managing editor. All published volumes in full text can be reached free of charge through the website www.ofaltalmoloji.org. Requests for subscription should be addressed to the Turkish Ophthalmological Association.

Manuscripts can only be submitted electronically through the Journal Agent website (http://journalagent.com/tjo/) after creating an account. This system allows online submission and review.

Instructions for Authors

Instructions for authors are published in the journal and on the website www.ofaltalmoloji.org

Material Disclaimer

The author(s) is (are) responsible for the articles published in the Turkish Journal of Ophthalmology.

The editor, editorial board and publisher do not accept any responsibility for the articles.

The journal is printed on acid-free paper.
INSTRUCTIONS TO AUTHORS

The Turkish Journal of Ophthalmology is an official peer-reviewed publication of the Turkish Ophthalmological Association. Accepted manuscripts are published in both Turkish and English languages.

Manuscripts written in Turkish should be in accordance with the Turkish Dictionary and Writing Guide (“Türkçe Sözüluğu ve Yazım Kuralları”) of the Turkish Language Association. Turkish forms of ophthalmology-related terms should be checked in the TÖDNET Dictionary (“TÖDNET Sözüluğu”) http://www.todnet.org/). The manuscript should be submitted electronically and used accordingly.

The Turkish Journal of Ophthalmology does not charge any article submission or processing charges. A manuscript will be considered only with the understanding that it is an original contribution that has not been published elsewhere.

Reviewed and accepted manuscripts are translated either from Turkish to English or from English to Turkish by the Journal through a professional translation service. Prior to printing, the translations are submitted to the authors for approval or correction requests, to be returned within 7 days. If no response is received from the corresponding author within this period, the translation is checked and approved by the editorial board.

The abbreviation of the Turkish Journal of Ophthalmology is TJO, however, it should be denoted as Turk J Ophthalmol when referenced. In the international index and database, the name of the journal has been registered as Turkish Journal of Ophthalmology and abbreviated as Turk J Ophthalmol.

The scientific and ethical liability of the manuscripts belongs to the authors and the copyright of the manuscripts belongs to the Turkish Journal of Ophthalmology. Authors are responsible for the contents of the manuscript and accuracy of the references. All manuscripts submitted for publication must be accompanied by the Copyright Transfer Form [copyright transfer]. Once this form, signed by all the authors, has been submitted, it is understood that neither the manuscript nor the data it contains have been submitted elsewhere or previously published and authors declare the statement of scientific contributions and responsibilities of all authors.

All manuscripts submitted to the Turkish Journal of Ophthalmology are screened for plagiarism using the ‘iThenticate’ software. Results indicating plagiarism may result in manuscripts being returned or rejected.

Experimental, clinical and drug studies requiring approval by an ethics committee must be submitted to the Turkish Journal of Ophthalmology with an ethics committee approval report confirming that the study was conducted in accordance with international agreements and the Declaration of Helsinki (revised 2008) (http://www.wma.net/en/30publications/10policies/b3/). The approval of the ethics committee and the fact that informed consent was given by the patients should be indicated in the Materials and Methods section. In experimental animal studies, the authors should indicate that the procedures followed were in accordance with animal rights as per the Guide for the Care and Use of Laboratory Animals (http://oacu.od.nih.gov/regs/guide/guide. pdf) and they should obtain animal ethics committee approval. Authors must provide disclosure/acknowledgment of financial or material support, if any was received, for the current study.

If the article includes any direct or indirect commercial links or if any institution provided material support to the study, authors must state in the cover letter that they have no relationship with the commercial product, drug, pharmaceutical company, etc. concerned; or specify the type of relationship (consultant, other agreements), if any.

Authors must provide a statement on the absence of conflicts of interest among the authors and provide authorship contributions.

The Turkish Journal of Ophthalmology is an independent international journal based on single-blind peer-review principles. The manuscript is assigned by the Editor-in-Chief, who reviews the manuscript and makes an initial decision based on manuscript quality and editorial priorities. Manuscripts that pass initial evaluation are sent for external peer review, and the Editor-in-Chief assigns an Associate Editor. The Associate Editor sends the manuscript to three reviewers (internal and/or external reviewers). The reviewers must review the manuscript within 21 days. The Associate Editor recommends a decision based on the reviewers’ recommendations and returns the manuscript to the Editor-in-Chief. The Editor-in-Chief makes a final decision based on editorial priorities, manuscript quality, and reviewer recommendations. If there are any conflicting recommendations from reviewers, the Editor-in-Chief can assign a new reviewer.

The scientific board guiding the selection of the papers to be published in the Journal consists of elected experts of the Journal and if necessary, selected from national and international authorities. The Editor-in-Chief, Associate Editors, biostatistics expert and English language consultant may make minor corrections to accepted manuscripts that do not change the main text of the paper.

In case of any suspicion or claim regarding scientific shortcomings or ethical infringement, the Journal reserves the right to submit the manuscript to the supportings institutions or other authorities for investigation. The Journal accepts the responsibility of initiating action but does not undertake any responsibility for an actual investigation or any power of decision.

GENERAL GUIDELINES

Manuscripts may only be submitted electronically through the Journal Agent website (http://journalagent.com/tjo/) after creating an account. This system allows online submission and review.

The manuscripts are archived according to ICMJE, Index Medicus (Medline/Pubmed) and Ulakbim-Turkish Medicine Index Rules. Format: Manuscripts should be prepared using Microsoft Word, size A4 with 2.5 cm margins on all sides, 12 pt Arial font and 1.5 line spacing.

Abbreviations: Abbreviations should be defined at first mention and used consistently thereafter. Internationally accepted abbreviations should be used, refer to scientific writing guides as necessary.

Cover letter: The cover letter should include statements about manuscript type, single-journal submission affirmation, conflict of interest statement, sources of outside funding, equipment (if applicable), approval of language for articles in English and approval of statistical analysis for original research articles.

REFERENCES

Authors are solely responsible for the accuracy of all references.

In-text citations: References should be indicated as superscript immediately after the period/full stop of the relevant sentence. If the author(s) of a reference is/are indicated at the beginning of the sentence, this reference should be written as a superscript immediately after the author’s name. If relevant research has been conducted in Turkey or by Turkish investigators, these studies should be given priority while citing the literature.

Presentations presented in congresses, unpublished manuscripts, theses, Internet addresses, and personal interviews or experiences should not be indicated as references. If such references are used, they should be indicated in parentheses at the end of the relevant sentence in the text, without reference number and written in full, in order to clarify their nature.

References section: References should be numbered consecutively in the order in which they are first mentioned in the text. All authors should be listed regardless of number. The titles of journals should be abbreviated according to the style used in the Index Medicus.

Reference Format:

Journal: Last name(s) of the author(s) and initials, article title, publication title and its original abbreviation, publication date, volume, the inclusive page numbers. Example: Collin JR, Rathbun JE. Involutional entropion: a review with evaluation of a procedure. Arch Ophthalmol. 1978;96:1058-1064.
The study plan should be clearly outlined and include the following sections. Title, structured abstract, keywords relevant to the topic and indicate the objective of the study. Materials and Methods: The study and standard criteria used should be defined; it should also be indicated whether the study is randomized or not, whether it is retrospective or prospective, and the statistical methods applied should be indicated, if applicable. Results: The detailed results of the study should be given and the statistical significance level should be indicated. Conclusion: Should summarize the results of the study, the clinical applicability of the results should be defined, and the favorable and unfavorable aspects should be declared. Keywords: A list of minimum 3, but no more than 5 key words must follow the abstract. Key words in English should be consistent with “Medical Subject Headings (MeSH)” (www.nlm.nih.gov/mesh/MBrowser.html). Turkish key words should be direct translations of the terms in MeSH. The detailed results of the study should be given and the statistical significance level should be indicated. Conclusion: Should summarize the results of the study, the clinical applicability of the results should be defined, and the favorable and unfavorable aspects should be declared. Keywords: A list of minimum 3, but no more than 5 key words must follow the abstract. Key words in English should be consistent with “Medical Subject Headings (MeSH)” (www.nlm.nih.gov/mesh/MBrowser.html). Turkish key words should be direct translations of the terms in MeSH. Original research articles should have the following sections: Introduction: Should consist of a brief explanation of the topic and indicate the objective of the study, supported by information from the literature. Materials and Methods: The study plan should be clearly described, indicating whether the study is randomized or not, whether it is retrospective or prospective, the number of trials, the characteristics, and the statistical methods used. Results: The results of the study should be stated, with tables/figures given in numerical order; the results should be evaluated according to the statistical analysis methods applied. See General Guidelines for details about the preparation of visual material.

EDITORIAL

2017 issue 4 at a glance:

In the age group of patients undergoing cataract surgery, benign prostate hypertrophy is another extremely common age-related health problem. Loss of iris tone caused by the alpha-blockers used to treat benign prostate hypertrophy gives rise to a condition called intraoperative floppy iris syndrome, which complicates cataract surgery. Though this is now questioned before cataract surgery, Acar et al. found that discontinuing alpha-blocker therapy 10 days before surgery resulted in no favorable changes in anterior segment parameters, including pupil dilation, in their ultrasound biomicroscopic evaluation of 31 eyes of 19 patients.

Biberöglu et al. observed no significant differences in retinal nerve fiber layer or intraocular pressure (IOP) values before and after carotid artery stenting in 15 patients diagnosed with carotid artery stenosis (CAS) with no signs of Ocular Ischemic syndrome (OIS) when compared to 18 healthy male controls. As the effect of CAS treatment on IOP in the presence of OIS is well described in the literature, OIS emerges as a determinant of IOP levels post-stenting.

Tufan et al. compared the IOP reduction of eye drops vs. selective laser trabeculoplasty (SLT) in order to determine whether the procedure could replace medication and found that over a period of 6 months, 180 or 360 degree SLT lowered IOP comparably to medical therapy in eyes previously treated with timolol-containing fixed combination eye drops. Considering that preservative-free glaucoma medications are not available in our country and that compliance with eye drop therapy decreases with age and the number of drops to be applied, Tufan et al.’s study raises awareness of this replacement option and will impact the treatment preferences of patients and physicians.

Polat et al. investigated factors influencing compliance to intravitreal anti-vascular endothelial growth factor therapy among patients with wet type age-related macular degeneration (AMD). They determined the main factors leading to noncompliance to this therapy, which is probably the most expensive medical treatment in ophthalmology, were fear of injection, disbelief in the benefits of the treatment, financial limitations, continuation of treatment in another province, and systemic comorbidities. The authors state that raising the awareness of patients and their families may improve treatment compliance and success rates.

Erkan Turan et al. report that patients with similar strabismus diagnoses may exhibit different types of abnormal head position (AHP) and that patients may develop amblyopia or lack binocularity despite AHP. They conclude that attention to these details is required when diagnosing and treating patients with AHP.

In their screening study of schools for the visually impaired, Bingöl Kızıltunç et al. report that the causes of low vision and blindness was preventable in 27.6% and visual acuity improved with the use of low vision aids in 57.5% of 120 students, bringing attention to the serious deficiencies in the early diagnosis and rehabilitation of students in these schools.

In this issue’s review, Öz yol et al. compare the currently available intraocular lens materials in terms of uveal and capsular biocompatibility and review studies aimed at increasing the biocompatibility of intraocular lenses.

Serin et al. present two cases of molluscum contagiosum, a cause of unilateral chronic conjunctivitis. In their article, they include a valuable literature review on the differential diagnosis of unilateral chronic conjunctivitis, as well as discuss current treatment options for ocular molluscum contagiosum, which they diagnosed clinically and histopathologically.

Anterior segment optical coherence tomography (AS-OCT) is a relatively new imaging method primarily used in the assessment of anterior segment pathologies. Aslantürk Eren et al. evaluated AS-OCT findings such as lesion size, inner structure, degree of vascularity, and anterior and posterior surfaces in a patient diagnosed pathologically with spindle type iridociliary melanoma to determine whether AS-OCT can be used to distinguish benign and malignant tumors.

Koban et al. present what they believe to be the second case in the literature of mantle cell lymphoma with central nervous system involvement presenting with ophthalmoplegia. The authors remind us that ophthalmoplegia should also be considered among the initial signs of mantle cell lymphoma.

Cebeci et al. present a case of bullous type central serous choroidal retinopathy (CSCR), which can often be confused with the ocular symptoms of acute Vogt-Koyanagi-Harada disease. Because corticosteroid therapy administered for a diagnosis of intraocular inflammation may exacerbate CSCR and lead to irreversible damage, the authors emphasize that atypical, bullous CSCR should be considered in the presence of serous retinal detachment.

Sarıgül Sezenöz et al. offer a detailed discussion of their use of ranibizumab to treat secondary choroidal neovascularization in a rare case of choroidal osteoma.

We believe that this issue will become a frequently used reference for our colleagues due to the original research articles, the results of which will inform our clinical practice and future studies, and the review article and case reports, which present updated literature summaries in their fields.

Respectfully on behalf of the Editorial Board,
Sait Eğrilmez, MD
