

[TITLE] THE AUTHORS SHOULD PROVIDE THE DIAGNOSIS OR INTERVENTION OF PRIMARY FOCUS FOLLOWED BY THE WORDS CASE REPORTS

Authors:

[Include the names and affiliations of all authors]

Contact Details for Corresponding Author:

[Include the corresponding author's name, email address, and any other relevant contact information]

ABSTRACT

Introduction

- A detailed introduction highlighting the uniqueness of the case and its contribution to the scientific literature should be provided.
- The authors should clearly articulate what sets this case apart and emphasize its significance in the context of existing research.
- This section should contain main symptoms and/or important clinical findings.
- The main diagnoses, therapeutic interventions, and outcomes should be provided.

Conclusion

- The question of “what is the main “take-away” lesson(s) from this case?” should be answered.

Keywords

- The keywords should consist of 2 to 5 keywords that specifically identify the diagnoses or interventions discussed in your case report. Ensure ‘case report’ is one of the keywords to accurately categorize your submission.” [MeSH can be used].
- The references should not be mentioned in this section.

INTRODUCTION

- The authors should compose one or two paragraphs summarizing the unique aspects of the case, providing a clear rationale for its exceptional nature. You may include references to support the uniqueness of the case where applicable.

PATIENT INFORMATION

- All patient-specific information is de-identified to maintain confidentiality and privacy should be ensured.
- The authors should remove any personal details that could potentially reveal the patient's identity.
- Primary concerns and symptoms of the patient should be given.
- Medical, family, and psycho-social history including relevant genetic information should be expressed.
- The authors should express relevant past interventions with outcomes.

CLINICAL FINDINGS

- The authors should describe significant physical examination (PE) and important clinical findings.

TIMELINE

- Historical and current information from this episode of care organized as a timeline should be provided.

DIAGNOSTIC ASSESSMENTS

- Diagnostic testing (such as PE, laboratory testing, imaging, surveys) should be expressed.
- Diagnostic challenges (such as access to testing, financial, or cultural) should be mentioned.
- Diagnosis (including other diagnoses considered) should be given.
- Prognosis (such as staging in oncology) where applicable should be mentioned.

THERAPEUTIC INTERVENTION

- The authors should clarify types of therapeutic intervention (such as pharmacologic, surgical, preventive, self-care).
- The authors should express administration of therapeutic intervention (such as dosage, strength, duration).
- The authors should clearly describe any changes in therapeutic intervention, providing a rationale for each decision made.

FOLLOW-UP AND OUTCOMES

- The authors should include clinician and patient-assessed outcomes, if available.
- The authors should provide important follow-up diagnostic and other test results.
- The authors should address intervention adherence and tolerability, including a description of how these were assessed in the case report.
- The authors should report any adverse and unanticipated events encountered in the case report.

DISCUSSION

- The authors should engage in a scientific discussion outlining both the strengths and limitations associated with this case report.
- The authors should provide the scientific rationale for any conclusions drawn, including an assessment of possible causes.

CONCLUSION

- The authors should succinctly summarize the primary 'take-away' lessons of this case report in a single paragraph, without including references.

PATIENT PERSPECTIVE

- The patient should share their perspective in one to two paragraphs on the treatment(s) they received.

INFORMED CONSENT

- The authors should confirm whether the patient provided informed consent and be prepared to provide it upon request.

LAST CHECKS

- The resolution of the images used should be of high quality.
- Consent should be obtained from the patient for the use of images, and the source should be accurately referenced.
- The references used should not be older than 7 years.
- The tables used should be clear and informative.
